

ABSTRACT OF THE DISCLOSURE

A portable device has a portable telephone  
function and a music reproduction function. In a music  
reproduction mode, a dedicated unit receives music  
5 data from a memory and executes music reproduction  
processing. In addition, the dedicated unit generates  
vibrator vibration data based on which a vibrator  
output is provided in synchronism with the music  
reproduction. An audio output unit provides an audio  
10 output which is produced from a loudspeaker in  
accordance with an acoustic signal output from the  
dedicated unit. A peripheral output unit controls the  
driving of the vibrator in accordance with the vibrator  
vibration data output from the dedicated data.
